

Utterly Gutterly

With Julie Brown, director of Sheffield's Seamless Gutter Company

ALUMINIUM seamless guttering

Old, leaky guttering is unsightly and can cause serious damage to your home if it is not replaced. Aluminium seamless gutters will not rot like wood, or leak and discolour like plastic - as Robert and Pippa Proctor discovered

Two years ago we fitted aluminium guttering for Robert and Pippa Proctor at their home in Handsworth.

When they recently moved to Dronfield they took one look at their new property's leaky guttering and gave us a ring. Robert and Pippa are proof that once you've experienced the benefits of aluminium guttering you will want it wherever you live.

Says Pippa: *"We were impressed with the Seamless Gutter Company's work on our previous house, so it made sense to ring them when we moved to Dronfield. We discovered that wooden fascias and soffits on the new house were rotting, and the gutters and downpipes were made from asbestos."*

She and Robert asked us to fit seamless aluminium guttering, and replace the fascias, soffits and down pipes with maintenance free PVC. Of course, when dealing with hazardous materials such as asbestos we ensure it is disposed of in the correct manner.

"The Seamless Gutter Company were brilliant yet again," says Pippa. *"They did a great job, were punctual, clean and tidy. Our house looks great, and we don't have to worry about painting gutters and woodwork in the future."*

Seamless aluminium gutters are light, and more durable than other forms of guttering. Cast iron is prone to rusting and cracking, wooden guttering rots if not treated properly, and needs regular maintenance/painting.

Plastic guttering is relatively cheap and effective, but if not fitted properly it will leak if the joints creep open and the colour is likely

to fade.

Our aluminium gutters are made to measure on site, using a machine housed in the back of one of our vans. The long, continuous gutter runs are strong and visually appealing because we use internal fixing brackets. Seamless aluminium gutters are five inches wide, as opposed to the four-inch width of the plastic varieties so can carry much more rainwater plus. In addition to this our gutters are made from fully recyclable aluminium, which makes them environmentally friendly

The gutters are available in a range of pre-painted colours. The only attention they need is an occasional clear-out of leaves and debris.

The Seamless Gutter Company is a family business, writes director Julie Brown My husband Glen leads our installation team. He has over 15 years' experience fitting guttering.

Our continuous aluminium gutter system is approved by the British Board of Agrément, and has a life expectancy of at least 30 years.

Please call us for a no-obligation quotation and product demonstration.

OUR ROOFING DIVISION

Seamless Gutters specialised roofing team can undertake all aspects of roofing from minor repairs and weather damage through to a full re-roof. Please contact us to discuss your requirements
